

Talk by Don Crockett

RF Systems Engineer, Viasat, Inc.

Wednesday, April 11, 12:00 noon

Abstract:

Viasat Inc. currently holds a Guinness World Record for the highest-capacity communications satellite in the world. RF/microwave products are a key to Viasat's high-speed broadband services. Don Crockett, a RF systems engineer, will present information on how microwave measurements play a part in creating high capacity satellite broadband for the terabit world.

Bio:

Don Crockett – RF Systems Engineer

Mr. Don Crockett is a RF systems engineer at Viasat, with 20 years of experience in RF/microwave product development at microwave and mm-wave frequencies. Viasat is a communications company, providing high-speed broadband services and secure networking systems. The range of products Mr. Crockett has worked on in his career include: communication transceivers, automotive radar, phased array radar, and MMIC design.
